5.PRODUCT USE

In the product shown in the image, connection is provided with the bolt and nut assembly through the channels of the sigma profile marked in red. One of the things you should pay attention to during connection is whether the installation is done properly. In installations that are not made properly, vibration may occur during operation and unwanted situations may occur in your camera images.

The product is powered by a 2M long cable fixed on it. We need to make the 24V DC+ connection from our cable line with a red stripe, and we need to make the GND connection from our single color cable line. When the supplies are connected in reverse, the product will not be damaged, but the product will not work. Cuts, breaks, etc. on the cable. If there is a problem, please contact us before using the product.
