Our ringlights are used for shadow-free illumination of the objects examined.

They ensure symmetrical light around the camera lens and are used for surface and outline detection.

They are available with various beam angles, in all application-relevant color temperatures and with installed diffusers.

Ring Lights with switchable constant light are suited for operation from a 24 VDC voltage source.

They offer a constant light intensity over a wide voltage range and are distinguished by features such as trigger inversion and brightness adjustment.

Ring Lights are essential for lighting specular or diffused surfaces. Our Ring Lights are built with high density LEDs that create bright illumination of surfaces for a wide spectrum of Machine Vision inspection purposes.
